

FWO PROJECT 11L1822N

DMP TITLE

ADMIN DETAILS

Project Name: FWO project 11L1822N - DMP title

Project Identifier: 3M200601

Grant Title: 11L1822N

Principal Investigator / Researcher: Silvia Monteagudo

Project Data Contact: Silvia.monteagudo@kuleuven.be

Description: Osteoarthritis, the most prevalent joint disease, is characterized by joint damage that leads to pain and disability, and lacks curative treatment. In osteoarthritis, cartilage cells often develop abnormal differentiation towards hypertrophy, which contributes to joint destruction. These changes are associated with excessive activation of Wnt signaling. However, how Wnt signaling triggers hypertrophic differentiation is largely unknown. We have preliminary evidence that excessive Wnt increases local production of insulin growth factor- 1 (IGF1), a key player in the hypertrophy process. Here, we aim to study the molecular mechanism underlying this interaction and how this contributes to the development and progression of osteoarthritis, and we will also investigate the therapeutic implications of the new link Wnt/IGF1 for this disease. A successful project will lead to the identification of molecular events that trigger key disease-associated changes in cartilage, and may contribute to opportunities for osteoarthritis therapy.

Institution: KU Leuven

1. GENERAL INFORMATION

Name applicant

Ana Escribano

FWO Project Number & Title

11L1822N - Investigating a new molecular link between Wnt signaling and IGF1 in osteoarthritis

Affiliation

- KU Leuven

2. DATA DESCRIPTION

Will you generate/collect new data and/or make use of existing data?

- Generate new data
- Reuse existing data

Describe the origin, type and format of the data (per dataset) and its (estimated) volume, ideally per objective or WP of the project. You might consider using the table in the guidance.

Data used in this project will mostly be **new data**. Existing data of interest are transcriptome datasets from the research team, available from the GEO repository (<https://www.ncbi.nlm.nih.gov/gds/>), under accession numbers GSE77916 and GSE33656.

New data are **quantitative and qualitative experimental data including raw data, derived and compiled data**. Overall, data will be from biological (molecular, biochemical) experiments and from animal model experiments. Qualitative raw data (photos, images) will be stored in investigator hard-copy notebooks and in digital formats (TIFF, PDF). Original data files outputs from quantitative experiments will be collected in Excel datasheets. For data sharing across platforms, data will be additionally stored in csv and txt formats. Data analysis files will be pfx files (Prism), sav files (SPSS) and R-project files with outputs stored as txt and csv files. Animal experiment data are registered into KU Leuven's animal experiment LAIS system and compiled in excel and text files. Data from animal experiments are both qualitative and quantitative as above (tissue sections, images) and processed data such as scoring of cartilage damage. Data will be stored in notebooks and in digital format as above. Masterdata files will be write-protected after entering all data.

Data will be structured per experiment performed (Exp identifier) with structured subsets: 1. raw data (txt - csv) 2. analyses (txt - csv) 3. images (various formats) 4. "readme" txt information files. Additional structured datasets will be stored per derived manuscript.

The answers to this section were checked by:

co-principal investigator Prof. Rik Lories

3. LEGAL & ETHICAL ISSUES

Will you use personal data? If so, shortly describe the kind of personal data you will use (add the reference to your file in your host institution's privacy register - not relevant yet)

- No

Are there any ethical issues concerning the creation and/or use of the data (e.g. experiments on humans or animals, dual use)? If so, add the reference to the formal approval by the relevant ethical review committee(s)

- Yes

Research in this project is covered by study S56271 (Ethical Committee for Clinical Research UZ Leuven) and by study P159/2016 (Ethical Committee for animal research).

Does your work possibly result in research data with potential for tech transfer and valorisation? Will IP restrictions be claimed for the data you created? If so, for what data and which restrictions will be asserted?

- Yes

Data may be considered to claim intellectual property rights on the advise of Leuven R&D's valorisation team. LRD will be responsible for patent management and eventual licensing. Data may be used for industrial collaborations and will then be defined as KU Leuven background by LRD in good faith.

Do existing 3rd party agreements restrict dissemination or exploitation of the data you (re)use? If so, to what data do they relate and what restrictions are in place?

- No

No, there are no restrictions on our data at this stage.

The answers to this section were checked by:

co-PI Rik Lories

4. DOCUMENTATION & METADATA

What documentation will be provided to enable reuse of the data collected/generated in this project?

The following documentation will be provided: (1) a table of content (excel file and csv) with all project-related experiments including experiment number, date of implementation and name of the researcher who stored the experiment, (2) a brief description of the goal of the experiment and related work package (word and txt file), (3) a detailed protocol or link to an existing standard protocol (SOP) which will enable other researcher to repeat the experiment, (4) all data or link to another file with the (raw) data, (5) in case of animal work: a list of the used animals with details such as age, sex, housing and link with LAIS system information, (5) samples that are generated during the experiments will be stored and listed in a Cvs file or txt file, (6) if appropriate, illustrations of the data with legends and statistical analysis. In case that documentation is written or available in notebooks or stored on other files a link will be provided. (7) Read-me text files providing information about definitions used in the dataset files.

With the help of these documentations every authorized researcher will be able (1) to look up all the information of the performed experiments and (2) to repeat the experiment in exactly the same way.

Will a metadata standard be used? If so, describe in detail which standard will be used. If no, state in detail which metadata will be created to make the data easy/easier to find and reuse.

- No

Our anticipated data collection does not involve setups for which a metadata standard and specific repository exists. Data will therefore maximally be stored in portable formats such as txt, csv and pdf

5. DATA STORAGE & BACK UP DURING THE FWO PROJECT

Where will the data be stored?

How is back up of the data provided?

The data will be stored on the university's central servers with automatic daily back-up procedures, including ICTS Luna storage. The KU Leuven servers are secure online servers.

Is there currently sufficient storage & backup capacity during the project? If yes, specify concisely. If no or insufficient storage or backup capacities are available then explain how this will be taken care of.

- Yes

Sufficient storage and backup capacity are available at KU Leuven

What are the expected costs for data storage and back up during the project? How will these costs be covered?

Terabyte level storage is anticipated. Although FWO has no earmarked budget at its disposal to support research data management, FWO allows for part of **the allocated project budget** to be used to cover the cost incurred.

Data security: how will you ensure that the data are securely stored and not accessed or modified by unauthorized persons?

All data will be stored in a protected environment. Research data can only be accessed by a login following KU Leuven's policy for identifier and with password.

The answers to this section were checked by:

- Others

co-PI Rik Lories

6. DATA PRESERVATION AFTER THE FWO PROJECT

Which data will be retained for the expected 5 year period after the end of the project? In case only a selection of the data can/will be preserved, clearly state the reasons for this (legal or contractual restrictions, physical preservation issues, ...).

All research data will be kept at minimum 5 years after the end of the project

Where will the data be archived (= stored for the longer term)?

KU Leuven ICTS data storage center.

What are the expected costs for data preservation during the retention period of 5 years? How will the costs be covered?

For this project data storage of 1Tb is anticipated, resulting in a cost of 520 euro per year, which can be covered by the grant and beyond.

The answers to this section were checked by:

co-PI Rik Lories

7. DATA SHARING AND REUSE

Are there any factors restricting or preventing the sharing of (some of) the data (e.g. as defined in an agreement with a 3rd party, legal restrictions)?

- Yes. Specify:

IP protection and valorisation initiatives may restrict sharing of the data.

Which data will be made available after the end of the project?

All data will be made available after appropriate IP protection if this is applicable.

Where/how will the data be made available for reuse?

- In an Open Access repository
- In a restricted access repository
- Upon request by mail

The main output of the project will be original scientific research papers. These will adhere to KU Leuven's and FWO's Open Access policy.

In the context of Open and accessible science, original datasets will be made available with publication, either as supplementary files or using datasharing platforms such as figshare or Zolondo using a CC-BY licence.

Upon reasonable and specific request, any data subset and analysis can be made available.

For data transfer filesharing via KU Leuven Box or Belnet transfer (secure) will be used.

When will the data be made available?

- After an embargo period. Specify the length of the embargo and why this is necessary
- Upon publication of the research results

Data will be made available upon publication unless specific IP protections remain to be set.

Who will be able to access the data and under what conditions?

In principle any researcher upon reasonable request or through the data repositories.

What are the expected costs for data sharing? How will the costs be covered?

minimal costs expected (<500\$ per year)

co-PI Rik Lories

8. RESPONSIBILITIES

Who will be responsible for data documentation & metadata?

Silvia Monteagudo - Rik Lories - Frederique Cornelis

Who will be responsible for data storage & back up during the project?

Silvia Monteagudo - Rik Lories - Frederique Cornelis

Who will be responsible for ensuring data preservation and reuse?

Silvia Monteagudo - Rik Lories

Who bears the end responsibility for updating & implementing this DMP?

The PI bears the end responsibility of updating & implementing this DMP.
