

## FWO DMP Template - Flemish Standard Data Management Plan

Project supervisors (from application round 2018 onwards) and fellows (from application round 2020 onwards) will, upon being awarded their project or fellowship, be invited to develop their answers to the data management related questions into a DMP. The FWO expects a **completed DMP no later than 6 months after the official start date** of the project or fellowship. The DMP should not be submitted to FWO but to the research co-ordination office of the host institute; FWO may request the DMP in a random check.

At the end of the project, the **final version of the DMP** has to be added to the final report of the project; this should be submitted to FWO by the supervisor-spokesperson through FWO's e-portal. This DMP may of course have been updated since its first version. The DMP is an element in the final evaluation of the project by the relevant expert panel. Both the DMP submitted within the first 6 months after the start date and the final DMP may use this template.

The DMP template used by the Research Foundation Flanders (FWO) corresponds with the Flemish Standard Data Management Plan. This Flemish Standard DMP was developed by the Flemish Research Data Network (FRDN) Task Force DMP which comprises representatives of all Flemish funders and research institutions. This is a standardized DMP template based on the previous FWO template that contains the core requirements for data management planning. To increase understanding and facilitate completion of the DMP, a standardized **glossary** of definitions and abbreviations is available via the following [link](#).

Please provide a short project description	<p>The project is in the area of Commutative Algebra and its interactions with Algebraic Geometry, Combinatorics, and Convex Geometry. More precisely, the main goal is to study several (algebraic, geometrical and combinatorial) features of the notion of multidegrees or mixed multiplicities. The concept of multidegree provides the right generalization of degree to a multiprojective setting, and its study goes back to seminal work by van der Waerden in 1929. Since then, multidegrees have appeared in many results and applications that interconnect various branches of mathematics. This project proposal is aimed to prove highly original results that will improve our understanding of multidegrees (or mixed multiplicities). The first goal is to define and develop the notion of multidegree or mixed multiplicity in more general settings. Then, a second goal is to find explicit characterizations for important properties of multidegrees (e.g., determining when multidegrees are positive). As a particular case, we plan to study the projective degrees of certain rational maps. The third goal is to define and develop the notion of mixed multiplicities for (not necessarily Noetherian) graded families of ideals.</p>
