

DMP Equality Beyond Rights: Towards a Theory of Justice for Temporary Labor Migration

Project Name My plan (FWO DMP) - DMP Equality Beyond Rights: Towards a Theory of Justice for Temporary Labor Migration

Project Identifier 1199622N

Principal Investigator / Researcher Mario Cunningham Matamoros

Description This project involves mainly normative research addressing the moral conditions that would render temporary migration legitimate work programs in liberal democratic societies. All data collected will come from secondary sources and it will be used for the production of academic papers.

Institution KU Leuven

1. General Information

Name applicant

Mario Josue Cunningham Matamoros

FWO Project Number & Title

FWO Project Number: **1199622N**

FWO Project Title: Equality Beyond Rights: Towards a Theory of Justice for Temporary Labor Migration

Affiliation

- KU Leuven

2. Data description

Will you generate/collect new data and/or make use of existing data?

- Reuse existing data

Describe in detail the origin, type and format of the data (per dataset) and its (estimated) volume. This may be easiest in a table (see example) or as a data flow and per WP or objective of the project. If you reuse existing data, specify the source of these data. Distinguish data types (the kind of content) from data formats (the technical format).

Type of data	Format	Volume	How created
Academic books	printed, pdf, epub	1 GB - 5 GB	Authors wrote them
Academic papers	printed and pdf	1 GB - 5 GB	Authors wrote them
Reading notes (from secondary papers)	doc, odt, xls, pdf, ods, pencil notes in books	50 MB - 100 MB	Writing them by myself
Paper manuscripts and outlines	doc	50 MB - 100 MB	Writing them by myself

3. Legal and ethical issues

Will you use personal data? If so, shortly describe the kind of personal data you will use. Add the reference to your file in KU Leuven's Register of Data Processing for Research and Public Service Purposes (PRET application). Be aware that registering the fact that you process personal data is a legal obligation.

- No

Are there any ethical issues concerning the creation and/or use of the data (e.g. experiments on humans or animals, dual use)? If so, add the reference to the formal approval by the relevant ethical review committee(s)

- No

Does your work possibly result in research data with potential for tech transfer and valorisation? Will IP restrictions be claimed for the data you created? If so, for what data and which restrictions will be asserted?

- No

Do existing 3rd party agreements restrict dissemination or exploitation of the data you (re)use? If so, to what data do they relate and what restrictions are in place?

- No

4. Documentation and metadata

What documentation will be provided to enable reuse of the data collected/generated in this project?

No documentation will be provided to enable the reuse of data generated in this project. Reading notes and manuscripts can just be read. No code is needed to understand them.

Will a metadata standard be used? If so, describe in detail which standard will be used. If no, state in detail which metadata will be created to make the data easy/easier to find and reuse.

- No

5. Data storage and backup during the FWO project

Where will the data be stored?

1. All data will be stored in my work laptop's hard drive, my personal laptop's hard drive, an independent hard drive, and Dropbox.

How is backup of the data provided?

The data will be stored in 3 hard drives and an online server simultaneously.

Is there currently sufficient storage & backup capacity during the project? If yes, specify concisely. If no or insufficient storage or backup capacities are available then explain how this will be taken care of.

- Yes

A regular size hard drive (500 GB) suffices for the store of the data recollected and created in this project.

What are the expected costs for data storage and back up during the project? How will these costs be covered?

The data storage of this project does not involve any costs.

Data security: how will you ensure that the data are securely stored and not accessed or modified by unauthorized persons?

This project does not involve sensitive personal data, strictly confidential or confidential data. Namely, this project only works with nonconfidential data that can be accessed by whoever wants to have access to it. Hence, current storage suffices for any security concerns regarding data protection.

6. Data preservation after the FWO project

Which data will be retained for the expected 5 year period after the end of the project? In case only a selection of the data can/will be preserved, clearly state the reasons for this (legal or contractual restrictions, physical preservation issues, ...).

All data (reading notes, manuscripts) will be retained for the expected 5 year period after the end

of the project.

Where will the data be archived (= stored for the longer term)?

The data will be stored in 2 laptops, an individual hard drive, and Dropbox.

What are the expected costs for data preservation during the retention period of 5 years? How will the costs be covered?

There are no expected costs for data preservation.

7. Data sharing and reuse

Are there any factors restricting or preventing the sharing of (some of) the data (e.g. as defined in an agreement with a 3rd party, legal restrictions)?

- No

Which data will be made available after the end of the project?

No data will be made available after the end of the project. Given that the data is used to produce academic articles what will be available are the published articles that include - in different ways - the data.

Where/how will the data be made available for reuse?

- Upon request by mail

Working documents might be shared if convenient via email exchange.

When will the data be made available?

- Upon publication of the research results

All relevant data available to the public will be part of published publications.

Who will be able to access the data and under what conditions?

Only people that request the data will have access and the (non-confidential) data they received will depend on what the researcher thinks is relevant to share (once again, I'm referring to reading notes and manuscripts)

What are the expected costs for data sharing? How will the costs be covered?

There will be no costs for data sharing.

8. Responsibilities

Who will be responsible for data documentation & metadata?

The main researcher of the project (me).

Who will be responsible for data storage & back up during the project?

The main researcher of the project (me).

Who will be responsible for ensuring data preservation and reuse ?

The main researcher of the project (me).

Who bears the end responsibility for updating & implementing this DMP?

The PI bears the end responsibility of updating & implementing this DMP.
