Research Data Summary

List and describe all datasets or research materials that you plan to generate/collect or reuse during your research project. For each dataset or data type (observational, experimental etc.), provide a short name & description (sufficient for yourself to know what data it is about), indicate whether the data are newly generated/collected or reused, digital or physical, also indicate the type of the data (the kind of content), its technical format (file extension), and an estimate of the upper limit of the volume of the data.

Dataset name / ID	Description	New or reuse	Digital or Physical data	Data Type	File format	Data volume	Physical volume
qPCR	qPCR data, created by Light Cycler machine	N	D	N	.pcrd, .pdf, .xlsx	<100MB	
Western blots	Scans of western blots, created by Bio-Rad ChemiDoc Imaging System	N	D	I	.scn, .tif, .ppt	<1GB	
Flow cytometry	Flow cytometry data, created by flow cytometer (Sony ID7000, BD FACSymphony, Cytek Aurora)	N	D	N	.fcs, .csv	<1TB	
Confocal microscopy	Confocal microscopy images, created by confocal microscopes like Zeiss LSM880	N	D	I	.czi, .tif	<1TB	
Biochemical/cell biological read-outs	Biochemical/cell biological readouts, created by platereader (Biotek)	N	D	N	.xpt, .xlsx	<1GB	
Metabolomics, proteomics	Mass spectrometry data, secondary data origin, meaning these experiments will be performed by a core facility and we will receive an .xlsx file with the data from them.	N	D	N	.xlsx	<1GB	
DNA/RNA sequencing	Sequencing data, secondary data origin, meaning these experiments will be performed by a company/core facility and we will receive .ab1, .seq and/or .xlsx files with the data from them.	N	D	N	.ab1, .seq, .xlsx	<100MB	
Animal behavior read-out	Analysis of animal behavior, secondary data origin, meaning these experiments will be performed by a core facility and we will receive an .xlsx file with the data from them.	N	D	N	.xlsx	<1GB	
Data analysis	Data analysis	N	D	N	.xlsx, .prism	<1GB	
Statistical analysis	Statistical analysis	N	D	N	.prism	<1GB	
Microscopy slides	Microscopy slides	N	P				Around 500 slides stored in slide folders, will be discarded once the project is finished.
Frozen cells	Cryovials containing cells that were generated during the project	N	P				Around 50 cryovials stored at -80°C/nitrogen barrel, will be preserved also once the project is finished.
Other biological samples	DNA, RNA, protein samples generated during the project	N	P				Around 500 eppendorf tubes stored at -80°C, will be discarded once the project is finished.

If you reuse existing data, please specify the source, preferably by using a persistent identifier (e.g. DOI, Handle, URL etc.) per

dataset or data type:

N/A

Are there any ethical issues concerning the creation and/or use of the data (e.g. experiments on humans or animals, dual use)? If so, refer to specific datasets or data types when appropriate and provide the relevant ethical approval number.

- Yes, animal data (Provide ECD reference number below)

For this research project we conduct experiments on animals (mice). Ethical committee approval (167/2023) was obtained.

The human cell lines that are used in this study are well known and established cell lines. They are commercially available, the MSDS sheet can be consulted online and have been published. The laboratory of Dr. P. Vangheluwe shares an umbrella protocol for human cell lines with all other research groups within the Department of Cellular and Molecular Medicine. Ethical approval is in place (S63808).

Will you process personal data? If so, please refer to specific datasets or data types when appropriate and provide the KU Leuven or UZ Leuven privacy register number (G or S number).

- No

Does your work have potential for commercial valorization (e.g. tech transfer, for example spin-offs, commercial exploitation, …)? If so, please comment per dataset or data type where appropriate.

- No

Do existing 3rd party agreements restrict exploitation or dissemination of the data you (re)use (e.g. Material or Data transfer agreements, Research collaboration agreements)? If so, please explain in the comment section to what data they relate and what restrictions are in place.

- Yes

Related to WP2: The used polyamine transport inhibitors are under MTA from Dr. O. Phanstiel, UCF while the AMXT-1501 analogs are under MTA from Dr. M. Burns, Aminex Therapeutics. These compounds are strictly for the use in our lab and when publishing data concerning the polyamine transport inhibitors, Dr. O. Phanstiel and/or Dr. M. Burns should be mentioned on the paper.

Are there any other legal issues, such as intellectual property rights and ownership, to be managed related to the data you (re)use? If so, please explain in the comment section to what data they relate and which restrictions will be asserted.

- No

Documentation and Metadata

Clearly describe what approach will be followed to capture the accompanying information necessary to keep data understandable and usable, for yourself and others, now and in the future (e.g. in terms of documentation levels and types required, procedures used, Electronic Lab Notebooks, README.txt files, codebook.tsv etc. where this information is recorded).

I will keep a digital lab notebook with a description of all performed experiments. The lab notebook contains information on how

data were generated: the composition, method, temperature, incubation conditions, and a reference to the loading conditions of the considered material. In addition, modifications to protocols are written down in the lab notebook and the place where the material is being stored is also mentioned in the lab notebook. The digital lab notebook is stored on the J-drive and, once the research project has ended, will be stored on the K-drive for long-term storage. Raw data files of read-outs, analyzed data and statistical analyses are being stored on the J-drive and will be transferred to the K-drive at the end of the research project. The name of the folder of the saved data refers to the date, project, specifications and version of the data. All folders are organized on the j-drive according to the project, results, proposal, papers, presentation, administration, … I have access to a personal folder on the j-drive and a common folder of the lab containing protocols, list of plasmids, list of antibodies, list of cell lines. Furthermore, data will be made available to the broad audience as publications in peer reviewed journals. All data, constructs, cell and animal models will be made available upon reasonable request.

Will a metadata standard be used to make it easier to find and reuse the data?
If so, please specify which metadata standard will be used.

If not, please specify which metadata will be created to make the data easier to find and reuse.

- No

For now, no metadata standard will be used.

Data Storage & Back-up during the Research Project

Where will the data be stored?

- Shared network drive (J-drive)
- Large Volume Storage

I will store my data in a personal folder on the j-drive. This is our data repository for short term storage which is expandable, fast and the data can be modified by the researcher itself. Only the PI and the lab manager have access to all the folders of the j-drive. When a paper is published, the data will be moved to our k-drive. This is our repository for data archiving, for long term storage. Only the PI and the lab manager can move the data to this drive, but data on this drive cannot be modified or deleted. Only the ICT service can do this.

How will the data be backed up?

- Standard back-up provided by KU Leuven ICTS for my storage solution

Is there currently sufficient storage & backup capacity during the project?

If no or insufficient storage or backup capacities are available, explain how this will be taken care of.

- Yes

Regarding the j-drive (short term storage), 1 TB of storage space is foreseen for our research group and this is expandable in blocks of 100 GB.
Regarding the k-drive (data archive) a storage space of 100 TB is foreseen and this is also expandable in blocks of 100 GB.

How will you ensure that the data are securely stored and not accessed or modified by unauthorized persons?

Data are not saved locally on laptop/desktop but are stored in the KU Leuven secure data center.
Only two people have access to all folders: the PI and the lab manager. Each researcher has access to his own folder on the j-

drive and has read-only access to the data on the long-term storage (k-drive). Non-authorized persons can't access or modify the data.

What are the expected costs for data storage and backup during the research project? How will these costs be covered?

Each year €173.40 will be charged from our ICT service for the use of 1 TB on the k-drive (long term storage) and €519.00 will be charged each year for the use of 1 TB of the j-drive (short term storage). Back-up service is included in the price. The lab budget will be used to cover these expenses.

Data Preservation after the end of the Research Project

Which data will be retained for 10 years (or longer, in agreement with other retention policies that are applicable) after the end of the project?

In case some data cannot be preserved, clearly state the reasons for this (e.g. legal or contractual restrictions, storage/budget issues, institutional policies...).

- All data will be preserved for 10 years according to KU Leuven RDM policy

All data will be stored for ten years after the end of the research project.

Where will these data be archived (stored and curated for the long-term)?

- Large Volume Storage (longterm for large volumes)

Once the research project is finished, the data will be archived on the K-drive. This is our repository for data archiving and long term storage. Only the PI and the lab manager can move the data to this drive, but data on this drive cannot be modified or deleted. Only the ICT service can do this.

What are the expected costs for data preservation during the expected retention period? How will these costs be covered?

Each year €173.40 will be charged from our ICT service for the use of 1 TB on the k-drive (long term storage), back-up service is included in the price. The lab budget will be used to cover these expenses.

Data Sharing and Reuse

Will the data (or part of the data) be made available for reuse after/during the project?
Please explain per dataset or data type which data will be made available.

- Yes, as open data

Yes, in an Open Access repository

If access is restricted, please specify who will be able to access the data and under what conditions.

N/A

Are there any factors that restrict or prevent the sharing of (some of) the data (e.g. as defined in an agreement with a 3rd party, legal restrictions)?

Please explain per dataset or data type where appropriate.

- No

Where will the data be made available?

If already known, please provide a repository per dataset or data type.

- Other data repository (specify below)

All the data on which publications were based on will be made publicly available. All datasets generated or analyzed in this study will be deposited at Zenodo. All data will be moved to our long-term storage (=data archive) where the data is available under a read only mode for everybody within the lab and only the PI (Peter Vangheluwe) and the lab manager (Marleen Schuermans) have access to that drive. Data that are important for future applications and publications will not be made available.

When will the data be made available?

- Upon publication of research results

Which data usage licenses are you going to provide?

If none, please explain why.

- CC-BY 4.0 (data)

Do you intend to add a persistent identifier (PID) to your dataset(s), e.g. a DOI or accession number? If already available, please provide it here.

- Yes, a PID will be added upon deposit in a data repository

What are the expected costs for data sharing? How will these costs be covered?

Each year €173.40 will be charged from our ICT service for the use of 1 TB on the K-drive (long term storage) and €519.00 will be charged each year for the use of 1 TB of the J-drive (short term storage). These costs and the publication costs of the data will be covered by the lab.

Responsibilities

Who will manage data documentation and metadata during the research project?

During the research, I am responsible to collect and store data on a dedicated personnel drive. The data will be reviewed by Peter Vangheluwe (PI).

Who will manage data storage and backup during the research project?

Peter Vangheluwe (PI) and ICT service of KU Leuven

Who will manage data preservation and sharing?

Marleen Schuermans (lab manager) and Peter Vangheluwe (PI)

Who will update and implement this DMP?

Peter Vangheluwe (PI) bears the end responsibility of updating and implementing this DMP.
