DATA MANAGEMENT PLAN

1. Describe the datatypes (surveys, sequences, manuscripts, objects, …) the research will collect and/or generate and /or (re)use.

chemical compound characterisation (LC-MS data, NMR data, software specific data types)
quantitative cell binding (gamma counting, csv format data)
quantitiative tissue binding (autoradiography, TIFF data)
Biodistribution data (gamma counter CSV format data)
Dynamic biodistribution data (preclinical) (microPET camera, software specific)
Dynamic biodistribution data (clinical) (PET/CT camera, software specific)

2. Specify in which way the following provisions are in place in order to preserve the data during and at least 5 years after the end of the research.

storage repository: data are stored on the KU Leuven and UZ Leuven (clinical data) servers with automatic secured back up.

3. What's the reason why you wish to deviate from the principle of preservation of data and of the minimum preservation term of 5 years?

not applicable

4. Are there issues concerning research data indicated in the ethics questionnaire of this application form? If yes, which specific security measures those data require?

Depending on the results, IP may be secured on data generated by this research project so that data will not be made public after the time period required to protect IP.
Data from clinical studies on patients are stored on the secure network of UZ Leuven to protect privacy.

5. Which other issues related to the data management are relevant to mention?

None
